Reactor-Ready Filter Lab Reactor

Stirred, temperature-controlled, contained filtrations

Reactor-Ready Filter Lab Reactor combines a jacketed lab reactor and a filter into one system. This allows users to isolate their product without having to manually transfer their material from reactor to a separate filter, saving time and reducing product losses.

You can easily upgrade an existing Reactor-Ready to a filter reactor or have a standalone filter system.

Features include

- Rapid vessel exchange with quick-release vessel clamp and hose couplings.
- Filter vessels are fully jacketed down to base for accurate temperature control.
- Range of jacketed filter vessels in 1 and 2 litre volumes.
- Temperature range of filter vessels: -30 °C to +180 °C (jacket temperature).
- Also accepts full range of Reactor-Ready Standard and Process vessels.
- Innovative hose manifolds allow easy thermofluid drain down.
- Accepts all leading brands of overhead stirrer for agitated slurring and filtrations.
- Filter base accepts pre-cut filter membranes or you can cut your own membranes to size.
- Filter support plate aligns the base with the vessel for tool-free assembly.

Patented vessel clamp allows rapid vessel exchange without tools

- Unique clamp design allows vessel to be supported and clamped by a single operator in less than a minute.
- Use the same clamp to hold all vessel sizes; plus the vessels remain supported even when the clamp is unlocked.

Vessel support collar aids vessel loading

- Reactor-Ready uses an innovative support collar fitted to the neck of each vessel, which allows the vessels to be swapped in and out of the Reactor-Ready core like a cartridge.
- Vessel exchange is tool free and can easily be undertaken by one person.

Unique self aligning stirrer coupling saves time when changing vessels

- Patented drop-in stirrer coupling engages easily without the need for tools.
- Simply lower the stirrer coupling to engage with the stirrer guide below.
- The stainless steel stirrer coupling will fit in any standard stirrer chuck (for 10 mm diameter)

Stainless steel vessel support collar

Choice of PTFE stirring shafts

- Reactor-Ready Filter Reactor is offered with a PTFE turbine stirring shaft
- Other impeller styles are available on request

I-beam support allows the stirring motor to be positioned with ease

- I-beam allows the stirrer motor to be raised or lowered without needing to remount the stirrer.
- Reactor-Ready accepts all leading brands of motor or air-powered overhead stirrer with support rods up to 16 mm in diameter.

PTFE stirrer guide provides whip-free agitation

PTFE turbine stirrer

PTFE Stirrer Guide

- The Reactor-Ready's PTFE stirrer guide screws directly on to the glass lid and features a unique extended support which minimises wobble even at high speeds.
- The stirrer guide is chemically inert, gas-tight and suitable for work under vacuum.

Quick release PEEK hose couplings

- Operates over the temperature range -30 °C to +180 °C (jacket temperature).
- Quick-release, screwthread design allows rapid exchange of vessels without the use of tools.
- Lightweight, metal-free design prevents chipping and minimises strain on the glass fitting.
- All hoses have a 12 mm ID, maximising thermofluid flow and heating/cooling performance.

Hose manifolds allow easy thermofluid drain down

- The inlet and outlet hoses from the Reactor-Ready vessel connect to manifolds attached to the support rod. These manifolds serve two important functions:
 - a. Support the hoses running from the vessel, thereby eliminating stress on the glass sidearms.
 - b. Allows thermofluid drain-down, which provides a quick and clean method of removing the thermofluid from the vessel jacket when changing vessels.
- By opening the venting valve on the (upper) outlet manifold, thermofluid drains from the vessel back to the thermoregulator under gravity.
- Opening the drain tap on the (lower) inlet manifold allows drainage to an external reservoir.

Filter assembly is quick and easy

1. Aluminium filter plate cup supports your choice of PTFE or PEEK filter plate, giving wide solvent and temperature compatibility.
2. Removable 15 mm bore glass bottom outlet valve allows for easy cleaning.
3. Sintered glass membrane support prevents filter media from being damaged during filtrations.
4. Pre-cut filter membranes are available in a selection of materials and porosities.
5. Filter kits include a Silicone (-30 °C to +180 °C) and Viton (-20 °C to +180 °C) O-ring.
6. Gasket (available in PTFE or PEEK) combines with the O-ring to ensure efficient sealing.
7. The swivel aluminium filter plate support allows for simple alignment of filter with the vessel and supports the filter plate and filter cake even when the clamp is unlocked.
8. Filter clamp design allows the filter assembly to be clamped to the vessel lower flange with ease.
9. Vessel and filter assembly exchange is tool free and can be undertaken in minutes.

Reactor-Ready Filter Reactor in detail

An innovative workstation based on our popular Reactor-Ready platform

Precision ground lid and vessel flanges combine with PTFE collar and FEP-encapsulated O-ring to offer superior sealing performance.

Vessel clamp support allows easy vertical repositioning of the vessel whilst maintaining the stirrer coupling alignment.

Vessel-to-manifold hoses are supported by the manifolds and frame, eliminating stress on the vessel.

Venting stopcock on the outlet manifold allows quick and easy draining of the thermofluid during vessel exchange.

Quick-release PEEK coupling allows rapid exchange of vessels without the use of tools. Operates over the temperature range -30 °C to +180 °C (jacket temperature).

Thermofluid may be drained back to the thermoregulator or decanted via a fluid drain tap on the inlet manifold.

Heavy-duty base plate with levelling feet ensures that the Reactor-Ready support stand is secure and stable.

HDPE drip tray will catch any spills and can accommodate the contents of a 5 litre vessel and jacket.

Stirrer support I-beam allows the stirrer motor to be easily raised and lowered.
